Failed Logon Check

- Failed login check
- Check the 'more information' link within the GFI check
  - Expand 4625 event IDs to find the usernames/IP addresses initiating the failed attempts
  - Open event viewer on server and look for failed logon attempts
    - Search by event ID 4625
    - Find the source IP address from attempts outside of the network
    - Use http://www.iplocation.net/ to verify that the IP address should be blocked
  - Open firewall to block unique IP addresses attempting to login
    - Firewall login --> configure --> security --> policy -->
